Re: Docket No. 12-268

Dear Ms. Dortch:

Our company, Synergetic Audio Concepts, provides audio training to the audio industry. We work with churches, theaters, live sound and others who uses wireless mics and monitors.

We, Synergetic Audio Concepts, agree with Sennheiser's proposal to reserve two exclusive blocks of UHF for critical mics & ear monitors. It is extremely important to have reliable prime frequencies for these productions.

We agree with Sennheiser's proposal for auction winners to compensate wireless mic owners for any equipment that they will not be able to use after spectrum repacking. In 2009, it personally cost our company \$20,000 to replace our Wireless in-ear listening system due to the change in the 700 mhz frequency. For us to incur this expense again is very frustrating and unfair. This is one system that we own. If we replace all of our wireless gear, we are looking a thousands of dollars. We are a small company, (2 employees) and cannot absorb this huge expenditure again.

Most of the audio industry is classified as small businesses. Asking our industry to absorb this cost again will have a strong financial impact on us, and many businesses may not survive the change. Churches is non-for-profit organization that relies on donations. They are another industry who will be effected by this change as almost every church uses wireless gear with their services.

Respectfully submitted,

Brenda Brown, Principle
Synergetic Audio Concepts Inc.
